WEBVTT

1

00:00:03.710 --> 00:00:08.540

Ray Harwood | GoodClix: Yup, let me first start by resetting my camera.

2

00:00:09.700 --> 00:00:13.400

Ray Harwood | GoodClix: See how that works a little better. Alright!

3

00:00:13.710 --> 00:00:24.840

Ray Harwood | GoodClix: Hi, there, everybody! Ray Harwood! Here the purpose of this recording is to actually determine. Is there an audio transcription performed at the pro account level?

4

00:00:25.120 --> 00:00:30.910

Ray Harwood | GoodClix: What I currently see here? Let me pull this guy up.

5

00:00:38.530 --> 00:00:40.839

Ray Harwood | GoodClix: Well, that's not right, either, is there?

6

00:00:42.740 --> 00:00:44.100

Ray Harwood | GoodClix: It's

7

00:00:49.110 --> 00:00:50.510

Ray Harwood | GoodClix: maybe that's right.

8

00:00:53.740 --> 00:01:01.000

Ray Harwood | GoodClix: Yeah, it is right. Alright. Looking at this screen, look at that screen. Too many screens going on. Okay.

9

00:01:01.770 --> 00:01:14.160

Ray Harwood | GoodClix: but it says here the prerequisites for an audio transcription. our business education or enterprise license with cloud recording enabled and audio transcription enabled

10

00:01:14.780 --> 00:01:17.340

Ray Harwood | GoodClix: I'm seeing over here on my account.

11

00:01:17.360 --> 00:01:26.759

Ray Harwood | GoodClix: is a setting in meeting advanced when a cloud recording is available, notify me when the audio transcription is available.

12

00:01:26.970 --> 00:01:37.290

Ray Harwood | GoodClix: Now I'm going to go up here to let's make that easier. Go to recording here, go to cloud recording

13

00:01:37.710 --> 00:01:55.029

Ray Harwood | GoodClix: and active speaker, record audio. Only record the interpretation. If there is one record production studio customized view, if there's a webinar save chat messages, optimize, create an audio transcript.

14

00:01:55.150 --> 00:02:00.580

Ray Harwood | GoodClix: and it says nothing about it being under only certain conditions.

15

00:02:00.600 --> 00:02:09.689

Ray Harwood | GoodClix: and in fact, this is actually required in order to do the AI companion summary, I believe.

16

00:02:10.000 --> 00:02:12.360

Ray Harwood | GoodClix: variety of things there. So

17

00:02:12.690 --> 00:02:19.469

Ray Harwood | GoodClix: It appears to me then, that

18

00:02:21.190 --> 00:02:24.800

Ray Harwood | GoodClix: and the audio transcript will get generated.

19

00:02:28.470 --> 00:02:36.929

Ray Harwood | GoodClix: So what I don't know currently, is, will that be done in a vtt. File. Will there be a separate file?

20

00:02:36.970 --> 00:02:40.769

Ray Harwood | GoodClix: How will that be done in terms of a transcript.

21

00:02:40.960 --> 00:02:58.670

Ray Harwood | GoodClix: and will I get an AI summary or something? And how much does that provide? All of this is kind of new to me, and not that new. But it's it's definitely come a long way since the last time I really tried to use it. And so,

22

00:02:58.830 --> 00:03:05.249

Ray Harwood | GoodClix: yeah, I thought I'd give it a try. So with that in mind.

23

00:03:06.630 --> 00:03:14.500

Ray Harwood | GoodClix: gonna end this little meeting. Thank you for attending, and I let you know the results of my test.

24

00:03:15.030 --> 00:03:15.940

Ray Harwood | GoodClix: Goodnight.
